Corrected or substitute drawings were received October 28, 2003. These drawings are not acceptable. The substitute drawings are inconsistent with the drawings originally filed. Figures 2-7 do not correspond to originally filed drawings as the structure of the entire device has been altered in the drawings, with additional details added.

In Applicants remarks it is stated "the revised drawings attached to this Amendment, although updated to illustrate the most current and preferred embodiment of the invention, show exactly the same elements as in the original Figures 1 through 7 filed with the Application, and no more." However, this is not the case. The "updated to illustrate the most current and preferred embodiment" adds more to the drawings than those as originally filed. While such changes may not be reflected in an updated specification, the additions and alterations to the drawings do indeed constitute improper new matter to the disclosure.

The amendment filed October 28, 2003 is objected to under 35 U.S.C. 132 because it introduces new matter into the disclosure. 35 U.S.C. 132 states that no amendment shall introduce new matter into the disclosure of the invention. The added material which is not supported by the original disclosure is as follows: "a fixed axial alignment" of the shaft.

Applicant is required to cancel the new matter in the reply to this Office Action.

Claims 1-4 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Nowhere in the original specification is the shaft described as being in a fixed axial position. As presented in Applicant's remarks, this limitation is meant to distinguish over the

Art Unit: 3682

prior art references since the invention “in this Application is directed to an output shaft in fixed alignment with the housing of the gear drive. The adjustment feature of the claimed invention is directed to bearing float and preload adjustment, not axial alignment of the output shaft.”

However, this is in distinct contrast to the specification, which never mentions a fixed shaft, but which states on page 5, lines 14-18: “On gear drives with bevel gearing, the adjustment ring 18 will allow superior gear contact adjustment by allowing infinitesimal shaft axial adjustment rather than incremental adjustment performed with specific shim thickness. By turning the adjustment rings 18 in combination, the drive shaft 8 can be positioned to maximize the gear contact.” The amendment to the claims is in clear contradiction to the original specification as filed, as there is indeed no fixed axial shaft, as evidenced by the above passage.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
